

Installing Cygwin (Windows Installation) Diane Howard

@Daine Howard

1

What is Cygwin?

- A windows terminal that allows you to use Linux/Unix commands from your Windows system. For our assignments, we use Cygwin to connect to our remote Linux / Unix systems in the Cloud.

What...

...is it?

Cygwin is:

- a collection of tools which provide a Linux look and feel environment for Windows.
- a DLL (cygwin1.dll) which acts as a Linux API layer providing substantial Linux API functionality.

...isn't it?

Cygwin is not:

- a way to run native Linux apps on Windows. You must rebuild your application *from source* if you want it to run on Windows.
- a way to magically make native Windows apps aware of UNIX® functionality like signals, ptys, etc. Again, you need to build your apps *from source* if you want to take advantage of Cygwin functionality.

The Cygwin DLL currently works with all recent, commercially released x86 32 bit and 64 bit versions of Windows, with the exception of Windows CE and Windows NT4.

4

Installing Cygwin (2 of 2)

- Select setup.exe

Setup.exe

1. Save setup.exe to your desktop (the download may take a few minutes)

2. Select setup.exe from your desktop and the following installer will appear:

Continuing with installation...

@Daine Howard

7

Choose your Cygwin installation directory

@Daine Howard

8

Select local package directory to store Cygwin files

Note: Local package directory will default to your download directory so if you want Cygwin to reside in another location you must enter it.

@Daine Howard

9

Select your connection to the Internet to download Cygwin files

@Daine Howard

10

Choose a download site (any site will suffice)

@Daine Howard

11

Selecting packages to install (1 of 4)

- Files will be downloaded then you will be asked what file(s) to select.
- It is very important you select Open SSH / Open SSL to allow secure logins and encrypted copying over the internet. The Open SSH and Open SSL is located in Net. (see next slide for expansion of Net).

@Daine Howard

12

Selecting packages to install (4 of 4)

- Your screen will look like the following:
- Now select Next.

@Daine Howard

Resolving Dependencies

- Select the defaults provided.

@Daine Howard

15

Setting up...

- This may take up to 10-20 minutes...

@Daine Howard

17

Final Step

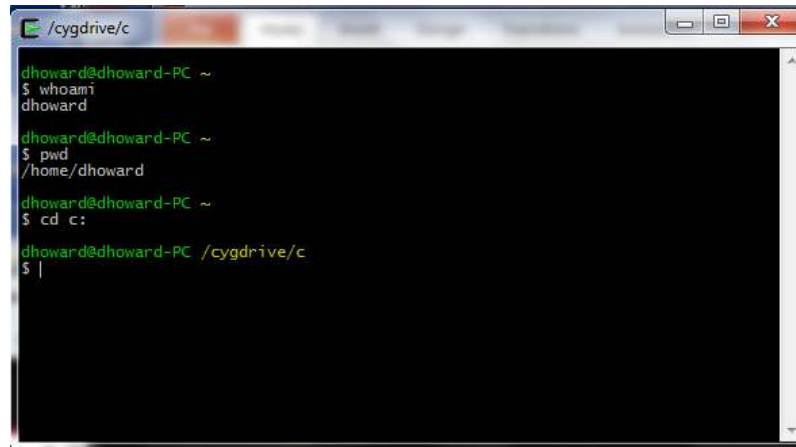

@Daine Howard

18

Cygwin terminal window looks like:

- Now you can run Linux / Unix commands (whoami, pwd, ...)

```
/cygdrive/c
dhoward@dhoward-PC ~
$ whoami
dhoward
dhoward@dhoward-PC ~
$ pwd
/home/dhoward
dhoward@dhoward-PC ~
$ cd c:
dhoward@dhoward-PC /cygdrive/c
$ |
```
